The present sequence is the coding sequence for human carbonic anhydrase isozyme IX (CA IX), an N-glycosylated membrane-associated glycoprotein slas known as the MN or G250 tumour-associated antigen. The invention relates to compositions and methods useful in inhibiting CA IX+ preneoplastic or neoplastic cells. The inhibitors are especially antagonistic anti-CA IX antibodies and other inhibitory agents that target the carbonic anhydrase activity of CA IX on these cells. The antibodies, or their antigen-binding fragments, are specifically reactive such an inhibitory editor of CA IX. Screening assays for identifying such inhibitory agents are provided. The antibodies, their antigenbinding fragments, and other inhibitory agents are useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treatment of cancers characterised by the expression of CA IX, such as: head and neck cancers; gynaecological cancers including ovarian, cervical, vaginal, endometrial and vulval cancers as well as gynaecological precancerous conditions such as metaplastic cervical tissues and condylomas; gastrointestinal cancers such as stomach, colon and oesophageal cancers; urinary tract cancer such as bladder and cancers; skin cancer; luver cancer; prostate cancer; lung cancer; and

The CA IX inhibitor of (MI) is useful for: (i) cancerous disease. The CA IX inhibitor of (MI) is useful for: (i) cancerous disease. The CA IX inhibitor of (MI) is useful for: (i) cancerous disease. The CA IX inhibitor of (MI) is useful for: (i) cancerous disease. The CA IX inhibitor of (MI) is useful for: (ii) for imaging tumors by scintigraphy, and useful for properties; (iii) for imaging tumors by scintigraphy, and useful for carcinomas, such as mammary, colorectal, urinary tract, ovarian, uterine, cervical, endometrial, squamous cell and adenosquamous carcinomas, head and neck cancers, mesodermal tumors such as neuroblastomas and certinoblastomas, sarcomas such as osteosarcomas and Ewing's sarcoma and cuminance in the color of CA IX in response to treatment by drugs, radiation and inhibitors. This sequence corresponds to the coding sequence for the human carbonic anhydrase IX corresponds to the coding sequence for the human carbonic anhydrase IX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating mammal for pre-cancerous or cancerous disease such as head and neck cancer, involves administering composition comprising compound such as inhibitors of MN/carbonic anhydrase IX enzymatic activity to mammal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a new isolated polynucleotide (a Human kidney tumour specific cDNA) comprising any one of the 1855 sequences identified in the specification for their complements, degenerate variants, sequences sequences consisting of at least 20 contiguous residues them, sequences that hybridise to them under highly stringent conditions or sequences having at least 75 or 90% sequence identity to the 1855 sequences. Also included are detecting/determining the presence of cancer in a patient, stimulating an immune response in a patient; treating kidney cancer in a patient, an isolated polypeptide encoded by one of the 1855 sequences, an expression vector comprising the polynucleotide operably linked to an
                                                                                                                                                              400
                                                                                                                                                                                                                                                                                                GlyLeuLeuPheAlaValThrSerValAlaPheLeuValGlnMetArgArgGlnHisArg 440
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotides and polypeptides, useful for detecting the presence of, and treating cancer, particularly kidney cancer by stimulating T-cells specific for a tumor protein, and stimulating immune response in a patient.
                                                                                                                                                                                                                                                                                                                                                                                  AGGGGAACCAAAGGGGGTGTGAGCTACCGCCCAGCAGAGGTAGCCGAGACTGGAGCC 1389

vector, an isolated antibody (or its antigen-binding fragment) that specifically binds to the protein, a fusion protein comprising at least one the proteins, stimulating and/or expanding T-cells specific for a tumour protein, an isolated T-cell population comprising at least composition comprising a first component (such as a carrier or immunositualant) and a second component (comprising one of the proteins) and second component (comprising one of the polypeptides, an antibody, T-cell or an antibody presenting cell that expresses the polymucleotide) and a diagnostic kit comprising at least one of the oligonucleotides, or at least one antibody and a detection reagent comprising a reporter group. The polymucleotides, on an ippoptides, and intenting cancer, particularly kidney cancer by stimulating and/or expanding T-cells specific for a tumour protein, and stimulating immune response in a patient. The present sequence is one of the Human kidney tumour specific cDNAs. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence. Use the sequence. The sequence cancer by use obtained in electronic format directly from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             249
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          309

```
The invention describes a new isolated polymucleotide (I) comprising: any one of the 1855 sequences identified in the specification; complements or degenerate variants of (a); sequences consisting of at least 20 contiguous residues of (a); sequences that hybridize to (a) under highly stringent conditions; or sequences that hybridize to (a) under highly stringent conditions; or sequences having at least 75 or 90% sequence identity to (a). Also described are: detecting (M1) or determining the presence of cancer in a patient; attimulating (M2) an immune response in a patient; treating (M3) kidney cancer in a patient; an isolated or polypeptide (II) enrocded by (I) and comprising, or having at least 70 or 90% sequence identity to, any one of the 8 sequences identified in the specification; an expression vector (III) comprising (I) operably linked to an expression control sequence; a host cell (IV) transformed or transfected with (III); an isolated antibody (V) or its antigen-binding fragment that specifically binds to (II); a noligonucleotide (VII) that hybridizes to the nucleotide sequences cited above under highly stringent conditions; stimulating (M4) and/or expanding T-cells specific for a tumor protein; an isolated T-cell spulling the T-cells in (M4); a comprising at least one (II) comprising the T-cells in (M4); a composition (IX) comprising a first component such as a carrier or immunostimulant and a second component such as a carrier or immunostimulant and a second component comprising (I), the polymetric specifically binds to (II), (VI), or an antigen-presenting cell that specific and a diagnostic kit (X) comprising at the plagnoutle comprising a feet to expresses the polymucleotide, or at least one of the polymucleotide, or at least one of the presence of, and treating cener, particularly kidney tumour cDNN, expression of which is increased in concer by stimulating and vor expanding T-cells specific for a tumor concern, and stimulating and energence of a patient. This sequence of the concern of the concer
                                                                                                                                                                              New isolated polymucleotides and polypeptides, useful for detecting the presence of, and treating cancer, particularly kidney cancer by stimulating T-cells specific for a tumor protein, and stimulating immune response in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1519 BP; 296 A; 456 C; 453 G; 314 T; 0 U; 0 Other;

MN gene, protein and nucleic acid fragments - used as primers and probes in the detection of MN antigens and antibodies, and in the treatment of (pre) neoplastic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the full length MuTu endogenous cellular component, MN, cDNA clone, which was isolated from lymphocytic choriomeningitis virus (LCMV) infected HeLa cells. Persistent LCMV, the exogenous MuTu transmissible agent (MX), infection increases the expression level of the MN gene. MN is a putative oncogene, and can treatment of neoplastic (NP), or pre-NP diseases. NP diseases can be treatment of neoplastic (NP), or pre-NP diseases. NP diseases can be treated using DNA antisense to MN transcribed mRNA, anti-MN protein antibodies can be used for the diagnosis NP or pre-NP diseases and a vaccine contg. immunogenic amounts of the MN protein can be used to immunise a vertebrate against a NP disease as and a vaccine contg.
                                                                                                                                                                                                                                              MuTu; endogenous; cellular component; MN; HeLa cell; diagnosis; lymphocytic choriomeningitis virus; LCMV; putative oncogene; treatment; neoplastic; pre-neoplastic; disease; antisense therapy; antibody; vaccine; vertebrate; immunisation; ss.

The present invention describes a method of screening for preneoplastic/neoplastic disease. The method comprises: (1) determining whether abnormal MW gene expression is present in a vertebrate; and (2) if abnormal MW gene expression is determined to be present in the vertebrate, determining that the vertebrate has a significant risk of having preneoplastic/neoplastic disease. The MW gene is an oncogene and encodes an MW protein (also referred to as MW/CA IX isoenzyme). The MW protein is a tumour associated carbonic anhydrase isoenzyme. The method is used for detecting a wide variety of preneoplastic/neoplastic diseases in a vertebrate, preferably a human. The disease detected is mammary. bladder, renal, urinary tract, ovarian, uterine, cervical, endometrial, vapinal, valual, prostate, liver, lung, skin, thyroid, pancreatic, testicular, brain, head and neck, mesodermal, gallbladder, rectal, duodenal, jejunal, ileal, gastric, pancreatic duct, liver duct, gastric mucosa, gallbladder epithelium, small intestinal mucosa, colorectal mucosa, pancreatic disease. AAAA6540 to AAA16617 and AAY53228 to AAY5345 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention

The invention relates to the inhibition of cell adhesion mediated by the MN oncoprocein (also known as the MN/CA IX isoenzyme or the MN/C250 MN oncoprocein (also known as the MN/CA IX isoenzyme or the MN/C250 protein). The MW protein is a tumour-associated adhesion molecule which comprises a proteoglycan-like (PG) domain (AAB03017) which contains the protein's binding site, and a carbonic anhydrase (CA) domain (AAB03018). Abnormal expression of the MN protein is associated with tumorigenicity. The invention encompasses molecules (e.g., proteins and peptides) which which specifically bind to a site on the MN protein and peptides) which concompasses MN protein fragments which can be addeed to the extracellular environment to prevent the adhesion of vertebrate of also encompasses MN protein or MN protein fragments which can be addeed to the extracellular environment to prevent the adhesion of vertebrate or also encompasses in the protein and to a method of identifying a site of the binding site of the MN protein in a cell adhesion assay. The coverlapping peptides from the protein in a cell adhesion assay. The invention encompasses a vector comprising testing a series of coverlapping peptides from the protein in a cell adhesion assay. The invention encompasses a vector comprising the variable domains of a NN-specific antibody, where the domains are separated by a flexible compression. The invention also encompasses a vector comprising a nucleic acid encoding a cytocoxic protein or peptide operatively linked to the MN complastic cell that abnormally expresses MN gene promoter. Which inhibites the growth of a vector comprising a nucleic acid encoding a cytocoxic protein or peptide operatively linked to the MN gene promoter. Which inhibites the growth of a vector comprising and expresses of cand peptides, MN-binding proteins and peptides, MN-binding proteins and peptides. The present sequence (e.g., cancers) associated with or characterised by abnormal MN protein represent sequence represent represented and peptides.
                                                                                                                                                                                                                                                                                                                                                                                    A molecule which specifically binds to a site on MN protein (oncoprotein) and prevents adhesion of vertebrate cells to the protein, useful for treating preneoplastic or neoplastic diseases such as cancer.
                                                                                                                                                                                                                                                                 Pastorek J;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 1; Fig 1A-C; 154pp; English.

This invention relates to a novel monoclonal antibody identified as the MN/CA IX specific antibody prepared in knockout mice (CA IX deficient mice). Specifically, this antibody is directed trowards the MN gene, a cellular oncogene known alternatively as carbonic anhydrase 9, CA9 or MN/CA9, which encodes the MN protein that is also known as the MN/CA IX is obenixyme, carbonic anhydrase IX, CA IX or the MN/G250 protein. The present invention describes the generation of this monoclonal antibody, and immunoreactive fragments thereof, which are directed against non-cantibody can be useful diagnostically as a marker for preneoplastic/ nooplastic tumours, immunodetection methods and immunoracgeting captroaches. Accordingly, compositions exhibit cytostatic activity and are useful in the diagnosis, prognosis and treatment of various cancers including breast, bladder or lung cancer, in tumour therapy and in antibuton in the diagnosis or includence is the human MN cDNA of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 732
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    192
IX (CA IX) (or MN) protein or CA IX polypeptide which is released from precancerous and/or cancerous cells of a vertebrate into a body fluid. The invention may be useful for the development of compounds with a cytostatic activity or a vaccine whilet the disclosed sequences may be used for gene therapy. The protein and method are useful for screening, diagnosing or prognosing diseases associated with abnormal expression of carbonic anhydrase IX protein, such as precancerous and cancerous diseases like renal cell carcinoma, breast cancer or colorectal cancer. The monoclonal antibody may also be used for treating or precenting precancerous and cancerous diseases. The present sequence is that of the gene which encodes the human MN protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

The invention relates to a method of prognosticating a preneoplastic/neoplastic disease afflicting a subject vertebrate, where preneoplastic/neoplastic disease afflicting a subject vertebrate, where the disease affects a tissue that normally expression upon but loses or has significantly reduced MN/CAA IX expression upon carcinogenesis, comprising detecting an MN/CAA gene expression product in the sample, comparing the level of the MN/CAA gene expression product to in the sample, comparing the level of MN/CAA gene expression product to the average level of MN/CAA gene expression product to the average level of MN/CAA gene expression product to the average level of MN/CAA gene expression product to the average level of MN/CAA gene expression product to the average level of MN/CAA gene expression product to the average level of MN/CAA gene expression product disease as the subject vertebrate, and determining that the subject vertebrate has a poorer prognosis if the level of MN/CAA gene expression product quantitated is higher than the average level of MN/CAA gene expression product in the comparable samples. The methods and compositions of the present invention are useful in medical genetics, biochemical engineering, immunochemistry and oncology, in particular for prognosticating preneoplastic/neoplastic diseases of gastric mucosa, gallbladder, biliary ducts, ductal cells of duodenal glands, testis and celevary, basal cells of hair follicles and central nervous system choroid plexus. Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

English Claim 1; SEQ ID NO 3116; 44pp;

The present invention describes a method (MI) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in AB161664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating lobular cancer, aguamou

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
```

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent expession of anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 expression is indicative of smith-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producting a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or

The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent copplastic agent. The method involves exposing cells to a chemical agent cobe tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 comprises in at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity, and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is anti-neoplastic agent. And can be used for producing a product which is connected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, ossophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Horrigan

                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (MI) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent cobe tested for anti-ineoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 or ABL70110), or is at least 55% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast stomach, lung, thyroid, oseophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, caer cell cancer, infiltrating lobular cancer, sequamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                      change
                                                                                                                                                                                                                                                                                       Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits in increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated polypeptide, for cancer in a patient and for treating a mammal having lung cancer in a patient and for treating a mammal having lung cancer for other benign or precancerous lesions, e.g. atelectasis, lung cancer or other benign or precancerous lesions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchiectasis. The genes, polynucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences of ABX76124-ABX76474 represent lung cancer, such as articled polynucleotides of the
                                                                                                                                                                                                                             Lung cancer-associated polynucleotide; gene; ds; cytostatic; emphysema; antiinflammatory; antiasthmatic; non-small cell lung cancer; atelectasis; small cell lung cancer; benign lession; precancerous lesion; bronchitis; chronic obstructive pulmonary disease; hypersensitivity pneumonitis; interstitial pulmonary fibrosis; fibrosis; asthma; bronchiectasis.

Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr | 1st strand cDNA was primed with a Not1-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CR620502 1523 bp mRNA linear HTC 21-JUL-2004 full-length cDNA clone CS0DK007YK10 of HeLa cells Cot 25-normalized of Homo sapiens (human).

- Web: www.genoscope.cns.fr)
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                    CRS97234 110-100 1541 bp mRNA linear HTC 21-JUL-2004 full-length cDNA clone CS0DI085YF18 of Placenta Cot 25-normalized of Homo sapiens (human).

- Web : www.genoscope.cns.fr)
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CR590646 1492 bp mRNA linear HTC 21-JUL-2004 full-length cDNA clone CS0D4005YK14 of T cells (Jurkat cell line) cot 10-normalized of Homo sapiens (human).
